

Acceptance Scheme for Relay Protection in 10kV Distribution Room

Overview

This paper proposes a relay protection scheme based on random forest algorithm, combined with IoT technology for real-time data collection and processing, to improve the sensitivity and accuracy of relay protection. Long term cost reduction (TCO) for trainings and maintenance by reduce variety of relays A fast and selective arc fault mitigation for air-insulated LV & MV switchgear and Relion protection and control relays and sensor technology protect staff and plant facilities for many years. The principle is to grade the operating times of the relays in such a way that. This document supplements PJM Manual 07 which contains the minimum design standards and requirements for the protection systems associated with the bulk power facilities within PJM. This document provides recommendations, background and philosophy on relay protection that is not available in M07.
