

Corrosion of the distribution box body

Focus creates quality products

Overview

Corrosion, especially pitting and crevice corrosion. The corrosion mechanism of stainless steel parts is mainly electrochemical corrosion. Therefore, certain measures should be taken to prevent the distribution box from corrosion. First of all, materials with anti-corrosion. From Junction boxes to industrial enclosures, Delvalle weatherproof enclosures offer a wide range of sizes and styles to keep your project waterproof. Spain Phone +34 945 601 381 Outdoor low-voltage power distribution boxes (hereinafter referred to as "distribution boxes") are low-voltage distribution equipment used in 380/220V power supply systems to receive and distribute electrical energy. In. If the surface of outdoor electrical junction box is damaged, the exposed steel surface of waterproof electrical junction box will react with the atmosphere to repair itself, reforming the oxide "passivation film" and allowing weatherproof enclosure box to continue to play a protective role.
