

Deutsche Telekom lays fiber optic cables

Overview

The company has laid more than 750,000 kilometers of fiber-optic cable across Germany. This effort marks a significant upgrade to the country's telecommunications infrastructure by phasing out the outdated copper wires that have served for over five decades. And the network grows larger every day. That's why more and more households that are still using DSL to surf. In the highly competitive market for broadband and mobile connections, the potential for political disputes remains high: Deutsche Telekom's competitors want to use the upcoming gradual shutdown of DSL copper lines to expand their market share. With operations spanning over 50 countries, the company has long been a leader in telecommunications innovation. This purchasing model offers O2. Deutsche Telekom's fiber optic expansion not only promises high-speed Internet for private households, but also forms the basis for future innovations and economic growth.
