

## Do yellow pigtails need to be labeled with a color code

### Overview

Color Codes: Single Mode Fiber Pigtails are usually color-coded yellow, while Multimode Fiber Pigtails are typically orange or aqua. Understanding these differences can be crucial when determining which type of fiber pigtail will best serve the specific requirements of your network. Wire labeling involves a formal methodology that utilizes unique identifiers, such as alphanumeric codes or a color code system, to distinguish different functionalities, connections, and paths for the wires. In the photos above, on the left is a 1728 fiber cable with color coded buffer tubes, in the center are (from the top) singlemode zipcord cable used for patchcords with each fiber color coded, and on the right, a yellow. Each individual pigtail is color coded according to industry standard TIA-EIA-598-A. The white paper then discusses the process for sourcing compliant marking and labeling systems, and concludes with recommendations for both end-product manufacturers and label converting the safe installation or use of a given product. For. The ANSI TIA 606-B Cable Labeling Standards are a set of voluntary guidelines that are used in labeling and recording data about the wires used for computer systems.
