

Drilling holes for positioning cable trays and hangers

Overview

Drill the drill holes with $\varnothing \geq 7$ mm in the tray rail and tray base. To avoid transverse bending at higher loads, a joint plate must be used for tray widths of 400 mm or more in the joint area of the cable trays that are to be connected. Structural building members should never be cut, and cable trays should not be installed in hoist way or where subject to physical. When developing our cable support OBO can offer reliable solutions for systems, three attributes are at the routing and fastening cables securely core of what we do: efficiency, resili- for each of these installation challenge- and safety. Our cable support. This publication is intended as a practical guide for the proper and safe* installation of cable ladder systems, cable tray systems, channel support systems and associated supports. During forklift offloading on uneven ground, one must exercise extreme caution to prevent load shifting. The method gives details of how the work will be carried out and what health and safety issues and controls that.
