

## Dust protection for construction distribution boxes

### Overview

Therefore, in order to ensure the normal operation of the equipment and prolong the service life, the distribution box needs to take dust-proof measures. Common dust prevention measures include: installing gaskets, dust covers, fans, etc. Construction dust is not just a nuisance; it is a real risk to your lungs. This page tells you how to control these risks and why. The Control of Substances Hazardous to Health (COSHH) Regulations says you must protect against the risks from hazardous construction dusts. To achieve truly leak-proof dust protection. Pairing E-abel distribution boxes with Weipu industrial waterproof plugs creates a rugged, IP67-rated temporary electrical solution that resists weather, prevents accidental contact, simplifies field wiring, and helps you meet safety compliance. This specialized enclosure ensures reliable electrical distribution in outdoor installations. Control cabinets protect and maintain the function of the “brain” (the control system) of a machine or plant in the best possible way against malfunctions and mechanical damage.
