

EOC terminal box connection

Overview

This EOC (Ethernet over Coax) terminal transmits Ethernet signals over coaxial cables. It allows network connectivity through existing coaxial infrastructure by using a coaxial connector for the coax network, and RJ45 Ethernet ports for connecting to local network devices. EOC1121R4WL-R410 coaxial cable broadband access terminal. The relevant configuration in this paper is introduced in the case of EOC1121R4WL-R. RTP data streams, including 802. It can be used as either a sender or receiver but will need to be used with at least one other. OVT-BC-CM-2000IE-W series is wireless EoC terminal device product, which can be used independently by placing in user's home, besides common terminal functions, it also has wireless broadband access functions that can support users' mobile phones, laptops, tablets and other wireless devices.
