

Fiber optic router cannot be matched

Overview

Configuration errors are a hidden culprit: Firmware Updates : Ensure all devices run the latest firmware to avoid compatibility issues. For persistent issues: OTDR Testing : Locate breaks or attenuation points in long-haul fiber runs. This document describes how to troubleshoot fiber optic interfaces by addressing some of the fiber optic module and cabling specifications. There are no specific requirements for this document. This includes Doppler. This morning my ISP upgraded my Internet connection from a standard coaxial cable and Cisco modem to a fiber optic cable and Hitron modem Model Name NOVA-2004. Despite multiple attempts, the Archer AX6000 v1. As far as I understand, I need a PPPoE username and password to connect. This would then have the gateway modem/router on one IP. Assuming you have LC-Duplex SFPs (one fiber for Tx, another one for Rx), have you tried to swap the two fiber connectors at one of the ends?

Or perhaps you know exactly which one is which and you have connected Tx of one SFP to Rx of the other one and vice versa?

And an afterthought as you are.
