

## Fireproof partitions are added to the outside of the cable trays

### Overview

Seal the gap around cable trays to stop fire of cable tray penetrations. Fire partitions divide the tunnel but contain openings for the accommodation of cable. Therefore, it is crucial to set up fire-blocking sections (fire sections/fire partitions) on cable trays and select appropriate fire-blocking sections (fire sections/fire partitions) materials. \* Two (2) sticks of moldable putty (part number FSP-MPS) are also needed for each opening. Where cables pass through shafts, walls, slabs, or enter electrical panels or cabinets, openings shall be tightly sealed with firestopping materials in accordance with. Effective protection of cable systems around the world: our tried-and-tested FLAMMOTECT-A and DG-CR 0. 7 products are successfully used to protect cables in high-rise buildings, industrial buildings, and offshore facilities as well as in sensitive areas, such as hospitals, airports, production. The installation method of cable tray fireproof partition is as follows: 1 Firstly, it is necessary to choose a suitable location for installation. Secondly, it is necessary to ensure that the installed surface is. These partitions are physical separations within the tunnel to compartmentalise it and prevent fire spread. Use intumescent materials, sealants, or.
