

Gigabit Switch Aggregation Uplink

Overview

Equipped with future-proof fiber-optic and multi-Gigabit Ethernet (mGbE) ports as well as high-throughput uplink and stacking ports, they form the basis for efficient and fail-safe networks. Stacking allows network expansions, redundancy scenarios, and single IP management to. Provides 1G, 2. 5G, and 10G speeds for flexible customization, ensuring optimal performance, compatibility, and scalability Flexible interface options like copper, fiber, and PoE ensure seamless integration and cost-effective deployment Supports stacking for easier management, improved redundancy. Omada's 10G/multi-gigabit managed switches are equipped with 10 Gbps fiber, 10 Gbps copper, or 2. 5 Gbps Copper ports, offering maximum performance and low latency. Why Multi-Gigabit?

Revolutionary 5-speed Multi-Gigabit technology built in the NETGEAR multi-speed switches allows your devices to speed past the Gigabit barrier. Let your. LACP (Link Aggregation Control Protocol): LACP is an industry-standard protocol (802. 3ad) that dynamically manages link aggregation, provides automatic failover, and helps prevent misconfigurations by ensuring both ends of the link agree on the aggregation settings. This 24-port SFP switch with the ability to support the stacking.
