

High-Temperature Resistant Fiber Optic Grating Strain Gauge

Overview

The product is a fiber Bragg grating strain sensor (FBG strain gauge) encapsulated in high elastic alloy tube, used for strain measurement. In most cases, it is a single-segment single-ended structures, or it can be produced as a multi-segment single-ended structure. These sensors possess great sensitivity and reliability, which explains their growing popularity across various engineering and monitoring applications. They are suitable for being fixed easily onto the measurement object, like concrete beams, or rocks. They are useful to measure dynamic events on stiff materials, where a direct embedding of the. High-temperature strain gauges have garnered significant interest from researchers due to their high precision, exceptional temperature tolerance, and robust anti-interference capabilities.
