

High-precision intelligent PDU for distribution network automation

Overview

Equipped with advanced web-based interfaces and SNMP support, these PDUs allow IT managers to monitor current, voltage, and energy usage, or even perform remote outlet-level switching from anywhere in the world to ensure maximum uptime and operational efficiency. Managing and installing a rack power distribution unit (PDU) has never been easier than with the EL2P PDU. Whether that means speeding up Saturday installs or focusing on. Our comprehensive range of Smart nVent iPDUs, is designed to transform the way you manage power in your data center. nVent is the world leader in OEM smart iPDU design and manufacturing. Products include advanced solutions for real-world power, environmental, and security management problems in. The average power density of data center racks continues to rise to support AI and ML, crossing 10kW in 2023 i. Figure 1: From 7 kW per rack in 2021, we have already arrived at average rack densities of 12 kW, according to Omdia. Expect that upward trajectory to continue to 2030. These systems enable outlet-level visibility, remote power control, and integration with monitoring platforms, supporting modern requirements for distributed.
