

Houses near electrical distribution boxes

Overview

When buying a property near electrical infrastructure, your conveyancing solicitor will carry out searches that can identify future infrastructure projects including additional pylons, substations and new cable routes, access requirements over your land, rights of way for. When buying a property near electrical infrastructure, your conveyancing solicitor will carry out searches that can identify future infrastructure projects including additional pylons, substations and new cable routes, access requirements over your land, rights of way for. The most common substations close to homes are local distribution substations, which transform higher voltage electricity to normal mains voltage. There are many hundreds of thousands of similar substations throughout the UK, each typically supplying up to a few hundred houses. These substations. Living near a small distribution substation is a common scenario across many neighbourhoods. So does visibility, noise level, and substation type. In this guide, I'll explain exactly how much value you're likely to lose. More importantly, I'll reveal the specific buyer. If you are currently living in a house that is located near a pylon or electrical substation, or you are considering buying a house in this location, it is important to learn more about these structures and the possibility of harm from electromagnetic radiation.
