

How to install a residual current device RCD in a distribution box

Overview

Installing a residual current device (RCD) in your ABB distribution board is relatively simple if you're a bit tech-savvy. First, turn off the main switch for maximum safety. Therefore, an RCD exposed to such waveforms needs to be of a suitable type, otherwise a distorted waveform (or DC) could affect the time/current operation of an RCD and cause it to operate outside its correct operating characteristics – or, at worst, the RCD could fail to current. Distribution board is a safe system designed for house or building that included protective devices, isolator switches, circuit breaker and fuses to connect safely the cables and wires to the sub circuits and final sub circuits including their associated Live (Phase) Neutral and Earth conductors. Make sure you have watched the linked video below on how to strip and prepare wires and cables for termination before you do any wiring:.. more Audio tracks for some languages were automatically generated. Devices that operate with electricity can cause leakage due to various reasons. Therefore, not only the efficiency and reliability, but also the proper connection of this device is important.
