

How to install the distribution box offline

Overview

Red Hat offers a product to help with off line and disconnected installs / updates called Satellite. In short using reposync or createrepo are often a popular solution for most customers, if they do not. For more specific installations, we can download required packages onto a VM using the same distribution as our target system. Feeling ambitious?

We can even create an offline repository using “reposync”. If you or someone else make changes to this content while you're offline, Box Drive automatically uploads the revised content when you are back online so you are always. What's the best way to download a Python package and its dependencies from PyPI for offline installation on another machine?

Is there an easy way to do this with pip or easy_install?

I'm trying to install the Requests library on a FreeBSD box that is not connected to the Internet_. Related: How to. Install Configuration Manager distribution points to host the content files that you deploy to devices and users.
