

Industrial-grade distribution boxes are secondary boxes

Overview

Sub-distribution power boxes, sometimes known as secondary electrical panels or subpanels, distribute power from the main panel to specific areas within an industrial facility. These boxes have inner and outer doors, powder-coated exteriors, and are designed for safety and aesthetic appeal, with rainproof tops for outdoor work. Think of them as traffic controllers for power—they direct energy where it needs to go while protecting against overloads or. The outgoing line from the low-voltage end of the transformer is 0. 4kV to the distribution cabinet (primary distribution cabinet), then the outgoing line is led to the distribution box (secondary distribution box) in each building, and finally the outgoing line is led to the distribution cabinet. This ultimate guide explains what a distribution box does, its internal components, common types, real-world applications, and how to select the right DB Box for your project. These boxes house various circuit breakers.
