

Installation of fireproof baffles for cable trays

Overview

Install fire barriers within the tray to isolate different fire zones. When cable trays pass through walls or floors, seal openings using fire-rated penetration sealing materials. Route Planning and Layout Principles Coordinate with Building Structure: Cable tray routing should align with architectural design, avoiding unnecessary. Scope: Firestopping for busway, cable trays, cables, and trunking passing through walls in enclosed electrical installations. AF BAGS are intumescent and ablative fireproof pillows certified under EN 1366-3 for sealing up to EI 240 of cable tray penetrations. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray is used for instrumentation and control applications that require additional protection referred to support and protect numerous small.
