

Lifespan of pigtail jumper cables

Overview

Jumper cables typically last 5-7 years under normal conditions before showing signs of deterioration. However, a more practical lifespan often falls in the range of five to seven years before environmental factors or. Jumper cables are considered an essential piece of emergency road equipment. So, it's critical to know if these parts can go bad. High-quality cables with thick gauge wiring (4-6 gauge) and durable insulation outlast cheaper. Understanding the lifespan and reliability of your jumper cables can save you from unexpected failures when you need them most. In this text, you'll learn what affects jumper cable durability, how to spot when they're no longer reliable, and how to maintain and store them properly for long-term. The physical condition of the jumper cables is the biggest reason they will go bad. Because they are made of metal, they are subject to corrosion as time goes on.
