

## ONU Aggregation Switch

### Overview

They support link aggregation protocols such as Link Aggregation Control Protocol (LACP) and Static Link Aggregation, which allow multiple physical links to be combined into a single logical connection. This enhances bandwidth, redundancy, and ensures failover capability in. An 8-port, Layer 2 switch made for 10G SFP+ connections. High-performance 10G SFP modules for optimal connectivity. By bundling multiple network connections into a single high-bandwidth link, aggregation switches help. The GWN7830 Series of Layer 3 Aggregation Network Switches offers 3 model options, with up to 24 SFP ports and 12 SFP+ ports, which are ideal for medium-to-large businesses and enterprises that require high-performance networks with maximum capacity and control. Equipped with future-proof fiber-optic and multi-Gigabit Ethernet (mGbE) ports as well as high-throughput uplink. Provides 1G, 2.5G, and 10G speeds for flexible customization, ensuring optimal performance, compatibility, and scalability. Flexible interface options like copper, fiber, and PoE ensure seamless integration and cost-effective deployment. Supports stacking for easier management, improved redundancy. Data aggregation refers to any procedure that gathers data and expresses it in a condensed manner. Amounts or summary statistics are used in place of atomic data rows, which are often collected from several sources when data is aggregated.
