

OSFP optical module PAM4

Overview

OSFP (Octal Small Form Factor Pluggable) is a pluggable optical transceiver interface standard that supports eight electrical lanes (Tx/Rx) per module. Each lane can operate up to 100G PAM4, allowing total bandwidths of 400G or 800G depending on configuration. com Europe FS EuropeFREE SHIPPING on Orders Over EUR 79 VAT excl. Germany. There are two common types of 400G transceiver packages: OSFP and QSFP-DD. 6T Ethernet or InfiniBand connection may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any. The Marvell Ara PAM4 DSP is a next generation solution for GenAI and cloud datacenter interconnects utilizing pluggable transceivers. Ara features eight 200Gbps/channel PAM4 host electrical interfaces, and an octal 200Gbps/lane PAM4 optical interface with integrated high-swing laser-modulator. OSFP (Octal Small Form-factor Pluggable) modules are becoming increasingly important in achieving high-speed optical connectivity in the fast-growing world of data communications.
