

## Optical module sfbsfp

### Overview

The SFP optical module is a standardized, modular assembly designed to be quickly installed or removed from a device's port without requiring the device to be powered down. This key feature—being hot-pluggable—is essential for simplifying network maintenance and minimizing downtime. Integrated circuits and reference designs help you create a smaller and faster optical module design used in high-bandwidth data communication applications. Whether you are creating a 100-Gbps or 400-Gbps, small form-factor pluggable (SFP) module, SFP+ transceiver, XFP module, CFP, X2/XENPAK module. An SFP (Small Form-factor Pluggable) is a compact, hot-pluggable transceiver module that allows networking equipment—including switches, routers, servers, and media converters—to support different physical media, such as optical fiber or copper, without replacing the host hardware. SFP optical modules are the unsung heroes of fiber networking—the essential interface that converts.
