

Photonic Crystal Optical Modulator

Overview

In a photonic crystal (PC) structure, changes to the effective index of the cladding will result in a shift in the resonant frequency, which can be used to modulate an optical signal. It provides an expert-curated supplier directory, buyer-focused technical background information, and structured selection criteria to support professional procurement decisions. What are Optical Modulators?

An optical. In this example, we will characterize the performance of a nanobeam photonic crystal (PC) electro-optic modulator using CHARGE (electrical simulation) and FDTD (optical simulation). We show that the device exhibits an ultrahigh quality factor ($Q \sim 105$) and allow us to demonstrate electro-optic. Low-Voltage, Complex-DSP-Free 200G PAM4 / 140G OOK Operation of Si Photonic Crystal Slow-Light Modulator with Built-in EO Equalizer Keisuke Kawahara, Tai Tsuchizawa, Noritsugu Yamamoto, Yuriko Maegami, Koji Yamada, Nobuhiko Nishiyama, and Toshihiko Baba K.

Article Content

Inverse Design of Photonic Crystals through Automatic Differentiation

Gradient-based inverse design in photonics has already achieved remarkable results in designing small-footprint, high-performance optical devices. The adjoint variable method, which

Barium titanate thin film electro-optic modulator low ...

Abstract Ferroelectric barium titanate thin film electro-optic modulator 4 mm in length with low half-wave voltage of 2.85 V and effective electro-optic coefficient of 360 pm/V at 310 nm is reported.

Optimal photonic crystal slabs for modulators based on transitions ...

Calculations are done for 2D silicon-based photonic crystal slab with air holes, for various lattice types and shapes of holes, and changes of the effective refractive index between the first and

Yole Report Calls for Photonics Packaging Market to Triple by 2031

Yole Group anticipates the photonics packaging market to be shaped by forecasted changes and development in this rapidly evolving technology. Courtesy of Yole Group. A mature,

Comparing Hyperbolic Metamaterials vs Photonic Crystals in Nanooptics

Both hyperbolic metamaterials and photonic crystals offer unique advantages for developing ultra-compact wavelength division multiplexers, optical isolators, and high-speed

Variable Optical Attenuators

Variable optical attenuators, used in fiber communications, vary light attenuation. The article discusses operation principles and various performance parameters.

Electro-optic modulator based on photolithography fabricated p-i-n ...

Summary We present the first demonstration of an electro-optic modulator based on a photolithographically fabricated photonic crystal (PhC) nanocavity with a p-i-n junction with SiO₂

High Precision Lithium Niobate LiNbO₃ Crystal Wafer for Electro Optical ...

High quality LiNbO₃ wafers manufactured from precision lithium niobate crystals for excellent electro optical, piezoelectric, and nonlinear optical performance. These crystal wafers are widely used in

Meadowlark Optics Acquires Boulder Nonlinear Systems

Meadowlark Optics has announced its acquisition of Boulder Nonlinear Systems (BNS). Both companies are based in Colorado and produce optical components used in numerous scientific research fields

META 2026 Conference | Metamaterials & Photonics

META 2026: 16th International Conference on Metamaterials, Photonic Crystals & Plasmonics in Dublin, Ireland (July 14-17, 2026). Scopus-indexed proceedings,

Optical mid-infrared modulator based on D-shaped photonic crystal

PCF is a class of optical fiber based on the properties of photonic crystals. They are periodic microstructures based on 2D photonic crystals with air holes usually arranged in hexagonal,

Plasma-Induced Asymmetric Self-Phase Modulation and Modulational ...

Proceedings of 2nd International Conference on Photonics, Optics and Laser Technology, 2014 We investigate the ultrafast dynamics of femtosecond pulse propagation in a gas-filled kagome

[2310.07798] High-speed photonic crystal modulator with non-volatile ...

Optical and RF resonances can improve dT/dV , but introduce added challenges in terms of speed and spectral tuning, especially for high-Q photonic cavity resonances. Here, we introduce a

Low-Voltage, Complex-DSP-Free 200G PAM4 / 140G OOK Operation

59-fJ/bit Si Photonic Crystal Slow-Light Modulator with FinFET-Compatible Driving Voltage Keisuke Kawahara, Tai Tsuchizawa, Noritsugu Yamamoto, Yuriko Maegami, Koji Yamada, and Toshihiko

Optical Modulators – acousto-optic, electro-optic

Definition: devices allowing one to manipulate properties of light beams, such as the optical power or phase Categories: photonic devices, lightwave communications Concept tree: optical modulators

Distributed Quantum Computing at Scale | Photonic Inc.

Photonic Inc., is developing the world's first distributed quantum computing system built for commercial scale, powered by a unique silicon spin-photon architecture.
