

Photovoltaic inverter auxiliary power supply module

Overview

Designed for low-power applications (<100W) with galvanic isolation, our auxiliary power supply is a key component in both industrial and photovoltaic (PV) systems. It operates efficiently across a wide input voltage range, typically from 250V to 1000V, accommodating DC link. Solar Micro Inverter is able to help the solar photovoltaic PV system to achieve per-panel level Maximum Power Point Tracking (MPPT) to improve power yield performance even in unideal conditions such as cloud or tree shades or bird drops and dust on the PV panels. L6566BH has embedded 840V HV start-up. The total applicable voltage considering the 20% margin and using STN1HMK60 (600V) is ~1200V. K5 shows avalanche energy dissipation capability is far superior to best in class RDS(on) from competition. One trend is to move to larger strings of cells giving higher dc voltages to be converted to ac voltage for the grid.
