This article covers the procedures required to work safely with fiber optic components as well as some general information. Lightwave/fiber optic systems, their associated test sets, and similar operating systems use semiconductor laser transmitters that emit light at wavelengths of 850 nm or 0. It is important to note that inspection and cleaning are critical steps that MUST be performed before any fiber optic mating is completed; including. It is mandatory that proactive inspection and certification of each fiber end face, in accordance with IEC standard, is required to optimize connector and network performance while preventing costly damage and long-term maintenance and troubleshooting issues. This document provides basic overview.
