

## SFP optical module to LAN conversion

### Overview

A media converter is essential for the conversion process: Fiber to Ethernet Converter: This device will convert the fiber optic signal from the SFP module to an Ethernet signal. SFP modules are used to interface network equipment like switches and routers with fiber optic. The MC200CM is a media converter designed to convert 1000BASE-SX fiber to 1000Base-T copper media or vice versa. A key advantage of SFP+ Modules is that they are "hot-swappable", meaning they can be swapped out while the router is still powered on. They also support. The industry-standard Cisco Small Form-Factor Pluggable (SFP) Gigabit Interface Converter (Figure 1) links your switches and routers to the network. Optical and copper models can be used on a wide variety of Cisco. By converting the SFP optical module interface into an Ethernet interface chip, high-speed data transmission and stable connections can be achieved, meeting the needs of data centers, enterprise networks, and wide area networks (WANs). ), well beyond the 100m (328-ft. ) limit of conventional copper cable. Hardened Gigabit Fiber to Ethernet Med.
