

Switch PoE Selection

Overview

There are two types of PoE switches available for installation commercial-grade and industrial-grade which are designed to meet the specific needs of different environments. The main difference between these two types lies in their ability to withstand various environments and usage requirements. When choosing a PoE switch, it is important to consider the original PoE standard was called IEEE 802.3af, and allowed for 15.4 watts of power to be sent from a switch's port. Each PD was guaranteed to receive at least 12.95 watts, after losses due to resistance in the cable. In 2009, the IEEE 802.3at standard (also called PoE+) was released, doubling the per port power to 30 watts. Most recently, the n. Choosing the right PoE switch can provide higher efficiency and better performance for your network. Make sure you consider the above factors to choose the switch that best suits your needs. If you are still unsure which PoE switch is best for your requirements, please contact Etherwan and we will be happy to assist you.
