

The distribution box switch automatically tripped

Overview

Check the fuse or circuit breaker: Check for a blown or tripped fuse or circuit breaker. There are only five possible reasons. Can take trip switch load down the line, change other circuit. A tripping switch, or circuit breaker, is there to protect your home by cutting off electricity when there's too much demand or a fault in the system. It keeps an eye on the electrical flow, and if things get unsafe, it trips to prevent damage or even a fire. While this is a common safety mechanism designed to protect your home's electrical system, it can be frustrating when it keeps happening or you're. The loss-of-voltage release of the automatic air switch of the power supply system is an electromagnet. At the moment of loss of power, the armature is released under the drive of the spring, and then the trip mechanism is driven, and the air switch completes the tripping operation.
