

What is DX fiber optic cable

Overview

Corning MIC® DX armored plenum cables are standard MIC subunits placed inside a dielectric armor for ruggedness and superior crush resistance without the conductive properties of traditional armor. These cables are designed for use in intrabuilding backbone and horizontal. Simplex and duplex cables are the two primary structures used in fiber optic patch cords and pigtails. Their difference lies in the number of fibers, directional transmission behavior, and interface requirements for data, telecom and FTTH applications. A correct choice ensures proper Tx/Rx pairing.
