

What is an open-mesh cable tray

Overview

A wire mesh cable tray is an open-grid cable support system made of welded steel wires arranged in a mesh pattern. It is designed to route, protect, and organize power, data, and communication cables in a safe and efficient way. Manage cables with an open overhead system that's designed to handle heavy loads, easy to install on the jobsite and a more flexible option than traditional conduit systems. With the rapid expansion of digital infrastructure—especially in data systems support and route all types of cables. At temperatures below - 20 °C, the material will be any other purpose than. These trays are structural support systems designed with an open, grid-like structure that facilitates ventilation, making them ideal for various applications.
